Failure to do so will subject the Bidder to disqualification.**

I. General Information/Clarifications

1. Technical Specifications Section 02316, Subsection 1.03.F describes sand bedding as a material that meets ASTM C33. This subsection applies to sand bedding material placed immediately under, around and over buried pipes or conduit.

Sheet C2 provides a specification for mound sand to be used in reconstruction of the disposal beds. Note that this specification includes (but does not specifically require) sand meeting ASTM C33.

2. The Contractor may or may not, at their own discretion, rebuild or improve the road accessing Site No. 3. Regardless of improvements made or not made to the road, the road shall be restored to its current condition (gravel base with thin topsoil and healthy grass growth) at the completion of the WORK.
3. For bidding purposes, it may be assumed that there is no conflict between the Rochester Elementary School wastewater disposal field and the Town of Rochester Site No. 3. The contractor shall confirm the location of the Rochester Elementary School Disposal Field and protect it from heavy vehicle traffic or other damage using orange construction fence or similar material.
